

Note: Read the corresponding technical documentation to use the correct cable.

Biocompatible pressure sensor

The new version of the pressure sensor for biocompatible pumps includes the titanium filter cartridge (G1452A).

You can use the enclosed pressure sensor for all biocompatible pump versions. Replace the PEEK filter with the titanium filter (G1452A) or with the empty cartridge (A9652) together with the black bushing (P3830H).
